DETAILED ACTION

Reasons for allowance

The following is an examiner's statement of reasons for allowance: In Response
to the final office action, dated April 4, 2008, further in view of applicant's amendments
filed on 07/07/08, the application has been carefully reviewed and respectfully
considered.

According to applicant's remarks based on currently amended subject matter, as discussed in page 5 and 6, Applicants have amended claims 1 and 8 to include the claimed subject matter of dependent claims 4 and 10, respectively. Claims 4, 10 and 11 were objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the imitations of the base claim and any intervening claims.

In addition, claim 14 has been added to include the claimed subject matter of claim 11. Furthermore, claims 4-7 and 10-13 have been canceled by applicant's amendment, and the rejection has been withdrawn. Claims are now in condition for allowance for the reasons discussed below including all dependent claims depend on therefrom.

Art Unit: 2625

With respect to claims 1-3, the prior art searched and of record neither anticipates nor suggests the claimed invention as amended. In particular, regarding to claim 1, the prior art searched and of record neither anticipates nor suggests the claimed invention as amended, maximum gray balance adjusted value and a portion of a corresponding maximum color saturation adjusted value to produce respective gray balance adjusted and color saturation adjusted CMY data values; and wherein the portion of a corresponding maximum gray balance adjusted value is a function of the relative amount of gray and the portion of the maximum saturation adjusted value is a function of the relative amount of chroma, wherein; determining a relative amount of gray comprises determining a relative amount of gray using: RATIO=MIN(C, M, Y)/MAX(C, M, Y) wherein MIN(C, M, Y) is a minimum of the initial CMY data values and MAX(C, M, Y) is a maximum of the initial CMY data values; determining a relative amount of chroma comprises calculating (1-RATIO); and adding a portion of a corresponding maximum gray balance adjusted value and a portion of a corresponding maximum color saturation adjusted value to produce respective gray balance adjusted and color saturation adjusted CMY data values comprises: C=GRAYBAL C(C)*RATIO+SAT C(C)*(1-RATI-O) M=GRAYBAL M(M)*RATIO+SAT M(M)*(1-RATIO) C=GRAYBAL Y(Y)*RATIO+SAT Y(Y)*(-1-RATIO) wherein GRAYBAL C(C), GRAYBAL M(M) and GRAYBAL Y(Y) are maximum gray balance adjusted values, and SAT C(C). SAT M(M) and SAT Y(Y) are maximum color saturation adjusted values.

Art Unit: 2625

As to claims 8 and 9, claims are allowed for the reasons the prior art searched and of record neither anticipates nor suggests a method of gray balance adjustment and color saturation adjustment, comprising: generating respective gray balancing components for initial CMY data values; determining a relative amount of chroma in the initial CMY data values; generating respective color saturation adjustment components for the initial CMY data values; and adding respective gray balancing components and respective color saturation adjustment components to produce respective gray balanced and color saturation adjusted CMY data values, wherein generating respective gray balancing components comprises calculating, GRAYBAL C(C)*RATIO GRAYBAL M(M)*RATIO GRAYBAL Y(Y)*RATIO wherein GRAYBAL C(C), GRAYBAL M(M) and GRAYBAL Y(Y) are maximum gray balance adjusted values, and RATIO is a ratio between a minimum of the initial CMY data values, and a maximum of the initial CMY data values

Finally, claim 14, is also allowed for the reasons the prior art searched and of record neither anticipates nor suggests a method of gray balance adjustment and color saturation adjustment, generating respective gray balancing components for initial CMY data values; determining a relative amount of chroma in the initial CMY data values; generating respective color saturation adjustment components for the initial CMY data values; and adding respective gray balancing components and respective color saturation adjustment components to produce respective gray balanced and color

Art Unit: 2625

saturation adjusted CMY data values, wherein generating respective color saturation adjustment components comprises calculating: SAT_C(C)*(1-RATIO) SAT_M(M)*(1-RATIO) SAT_Y(Y)*(1-RATIO) wherein SAT_C(C), SAT_M(M) and SAT_Y(Y) are maximum color saturation adjusted values, RATIO is a ratio between a minimum of the initial CMY data values and a maximum of the initial CMY data values.

Therefore, all pending claims 1-3, 8-9 and 14, are Allowed for the reasons the claimed invention are distinct from the prior art searched and of record neither anticipates nor suggests the claimed invention as amended.
